Pop-up panels delve into details

Generate DIP
Derive `dip@store` from `aip@store`.
A Dissemination Information Package (DIP) is derived from one or more AIPs, and sent by Archives to the Consumer in response to a request to the OAIS.

Ingest SIP
Transfer `sip@producer` to `sip@store`.
A Submission Information Package (SIP) is delivered by the Producer to the OAIS for use in the construction or update of one or more AIPs and/or the associated Descriptive Information.

SIP to AIP
Transform `sip@store` to `aip@store`.
An Archival Information Package (AIP) is generated, consisting of the Content Information and the associated Preservation Description Information (PDI), which is preserved within an OAIS.

CAMBRIDGE UNIVERSITY LIBRARY

"I found the process of creating a dataflow really useful as I was able to reflect on the work that we have done on the Transfer Service. It made me question why certain choices were made, but also highlighted areas which we can improve on and should revisit (such as the part where we make an image on PAM and then it doesn't go anywhere and I reimage it on ADELE/FRED)."

"We are extremely impressed by how you have taken a complex set of workflows and distilled them into a clear, intuitive visualisation. I (Lucy) am especially fond of its resemblance to the London Underground map 😊. Thank you for the time, effort, and thought you have invested in translating our work into such an effective data flow diagram."
