

Taking a Risk?

Benefits of Applying the CHARM Reference Model at the British Library

What is the CHARM Model?¹

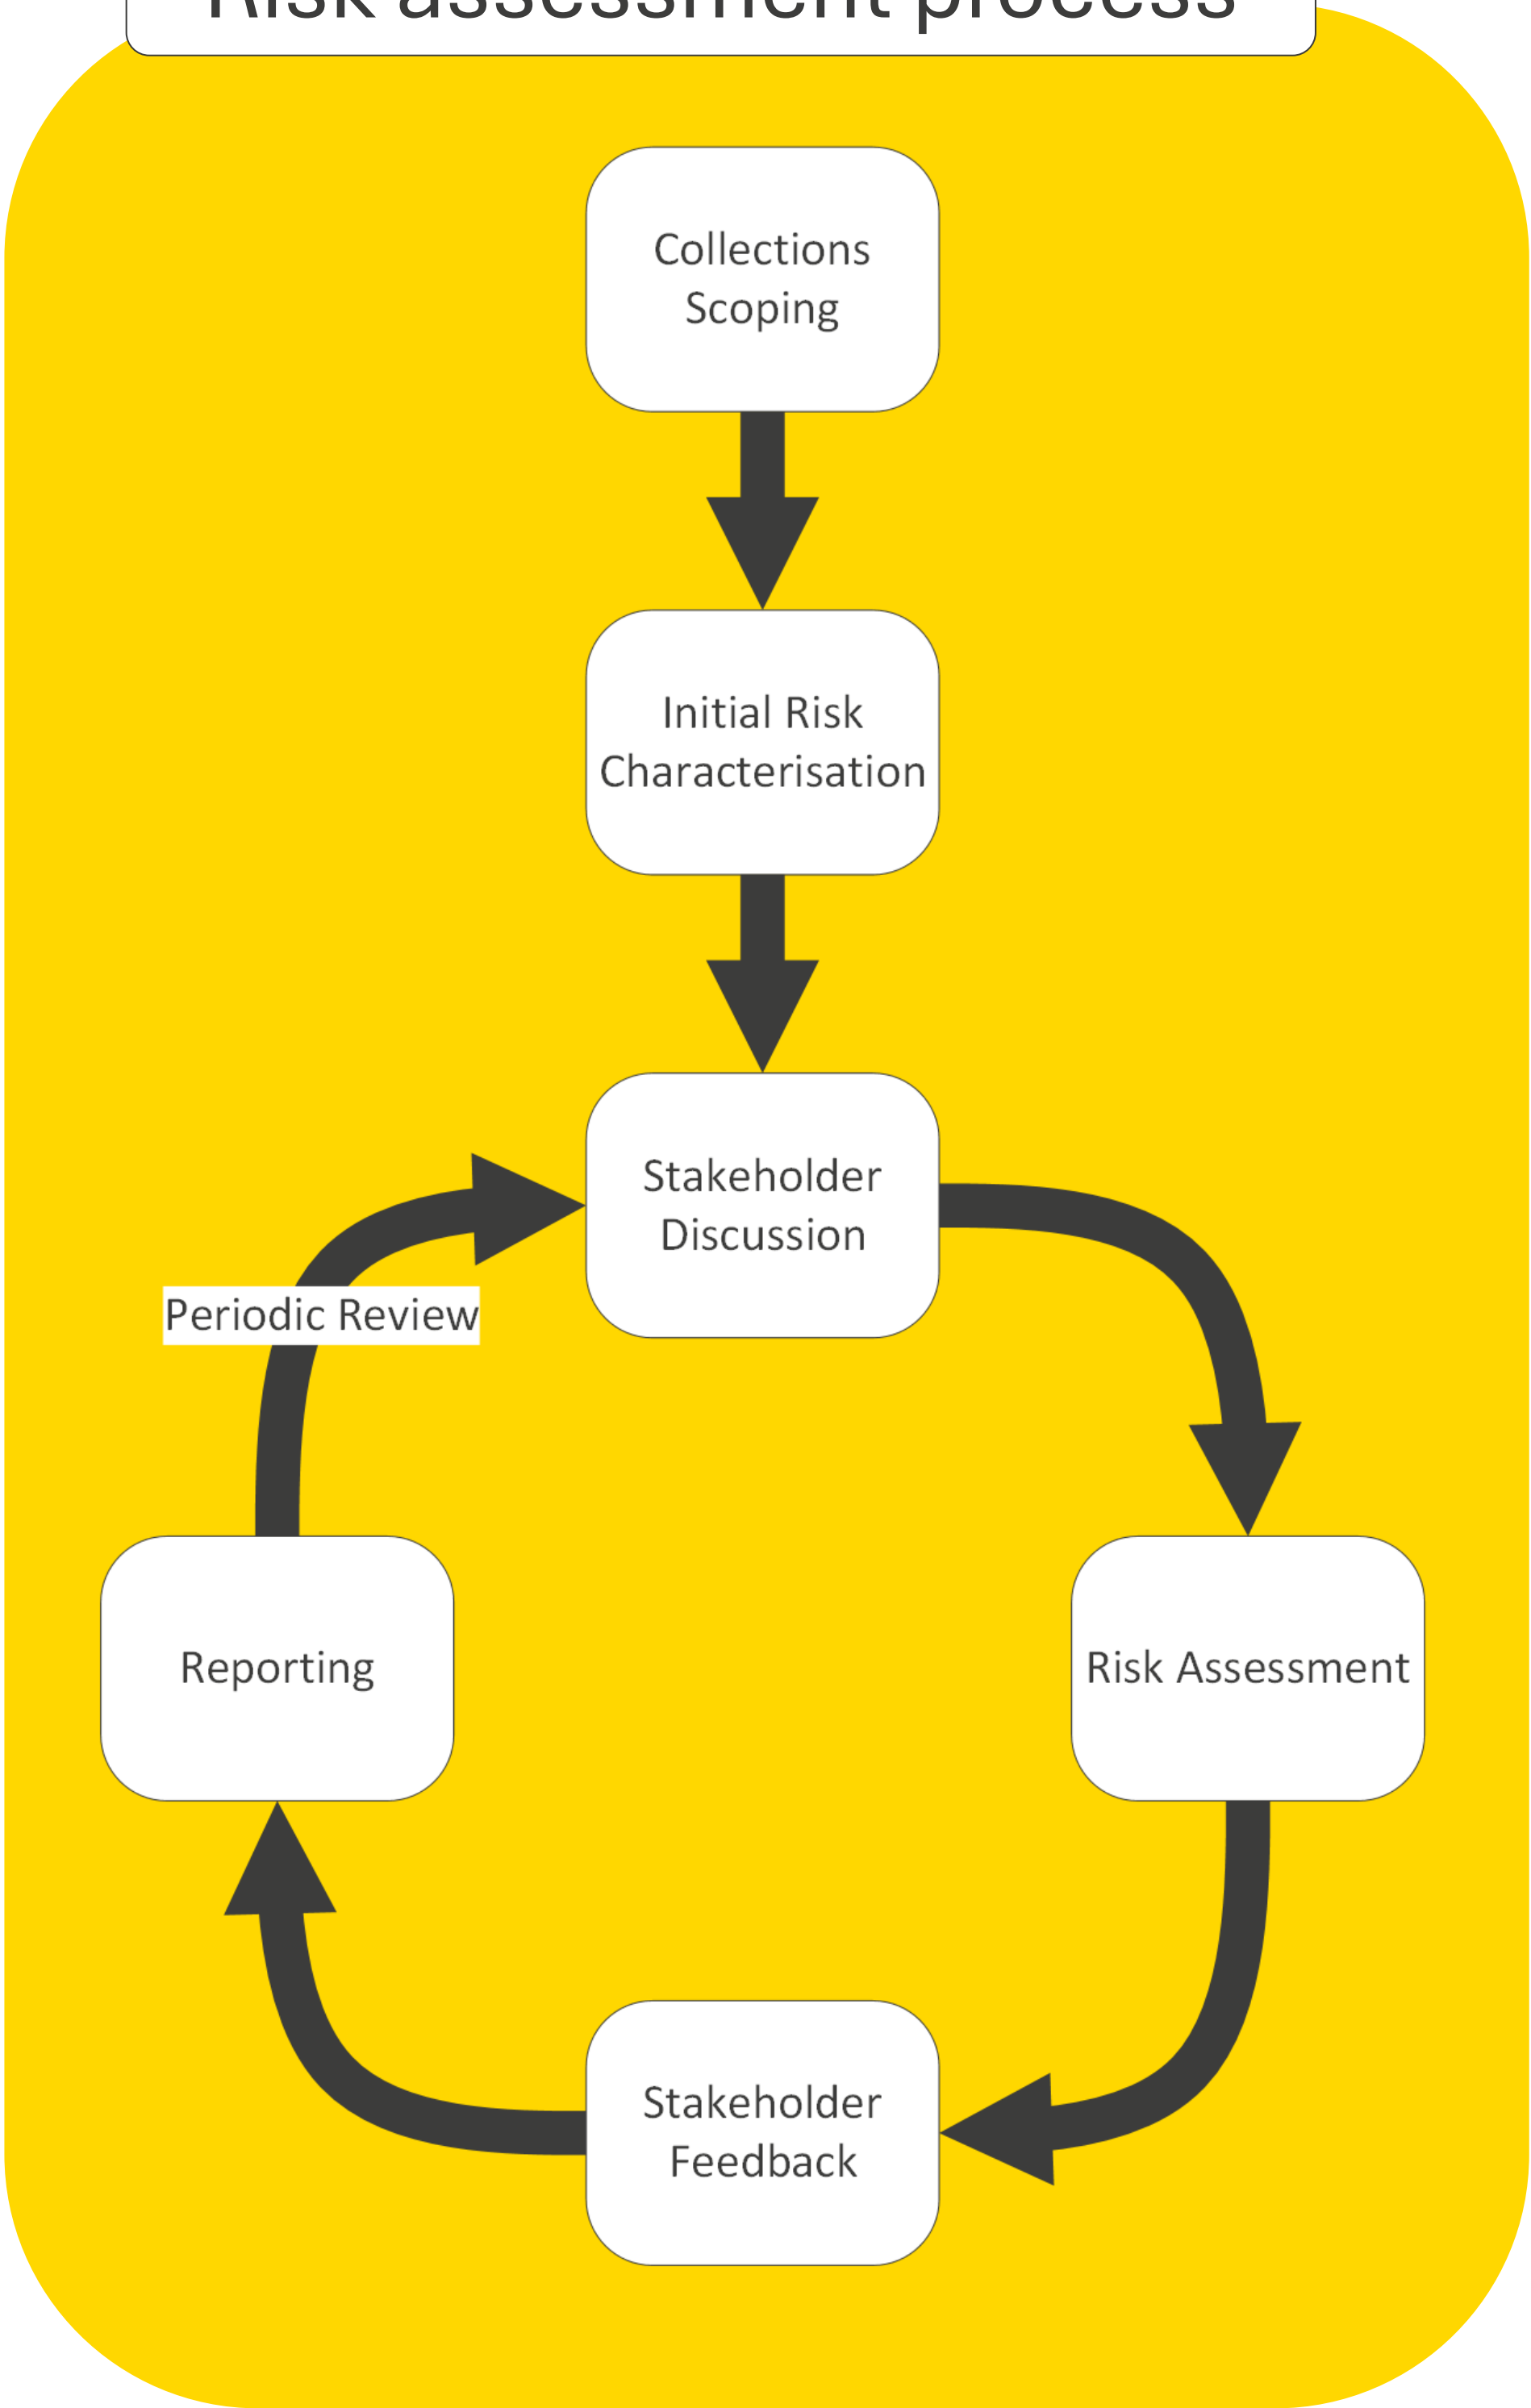

- Digital preservation risk assessment model and method.
- Provides an abstract representation of the digital preservation risk domain.
- Addresses 3 main areas of risk: organisational infrastructure, technological infrastructure and digital content.

[1] Pennock, M.E. (2024) Disentangling digital preservation risk: An interdisciplinary exploration and solution

How did the programme build community?

- An opportunity to listen to colleagues' concerns following the October 2023 cyber incident.
- Brought people together from different areas of the library and helped establish new connections.
- Summaries of the risk assessments were presented to internal groups.

Risk assessment process

How did it raise awareness?

- Provided opportunities for the Digital Collection Management (DCM) team to better understand how the collections were being processed.
- Enabled the DCM team to understand and offer advice on workarounds put in place following the cyber incident.
- Improved the relationship between DCM and the collecting areas with the shared purpose of better managing the digital collection.

A new tool for advocacy?

- The risk assessments produced an effective advocacy tool to clearly communicate the challenges faced by digital collections following the cyber incident.
- Findings were summarised in bitesize, digestible form for sharing with senior leadership and colleagues.
