

Transparent, Referenceable, Integrated, Preservation Planning

A whole-system approach to digital object management: requirements gathering, planning and operations. References and integrates multiple existing criteria, practices and guidance.

- A method for real world repositories to integrate their existing reference models, schemas, and criteria into an actionable design tool for planning and operations.
- All repositories of all service levels should share a common baseline of information about their practices. That information should be referenceable.
- A journey from the identification of drivers (internal and external) to the preparation of an integrated preservation plan.
- A series of assessments across the digital object's lifecycle.

Transparent & Referenceable

Integrated, Common, Standardised, Machine-Actionable, Persistently Identified, Versioned:

Information Artefacts

- Preservation Plan
- Digital Object characteristics
- Criteria
- Assessments
- Outcomes
- Actions

Actors

- Authorities
- Stakeholders
- Depositor characteristics
- User characteristics

Work in Progress!
