

NETARKIVET

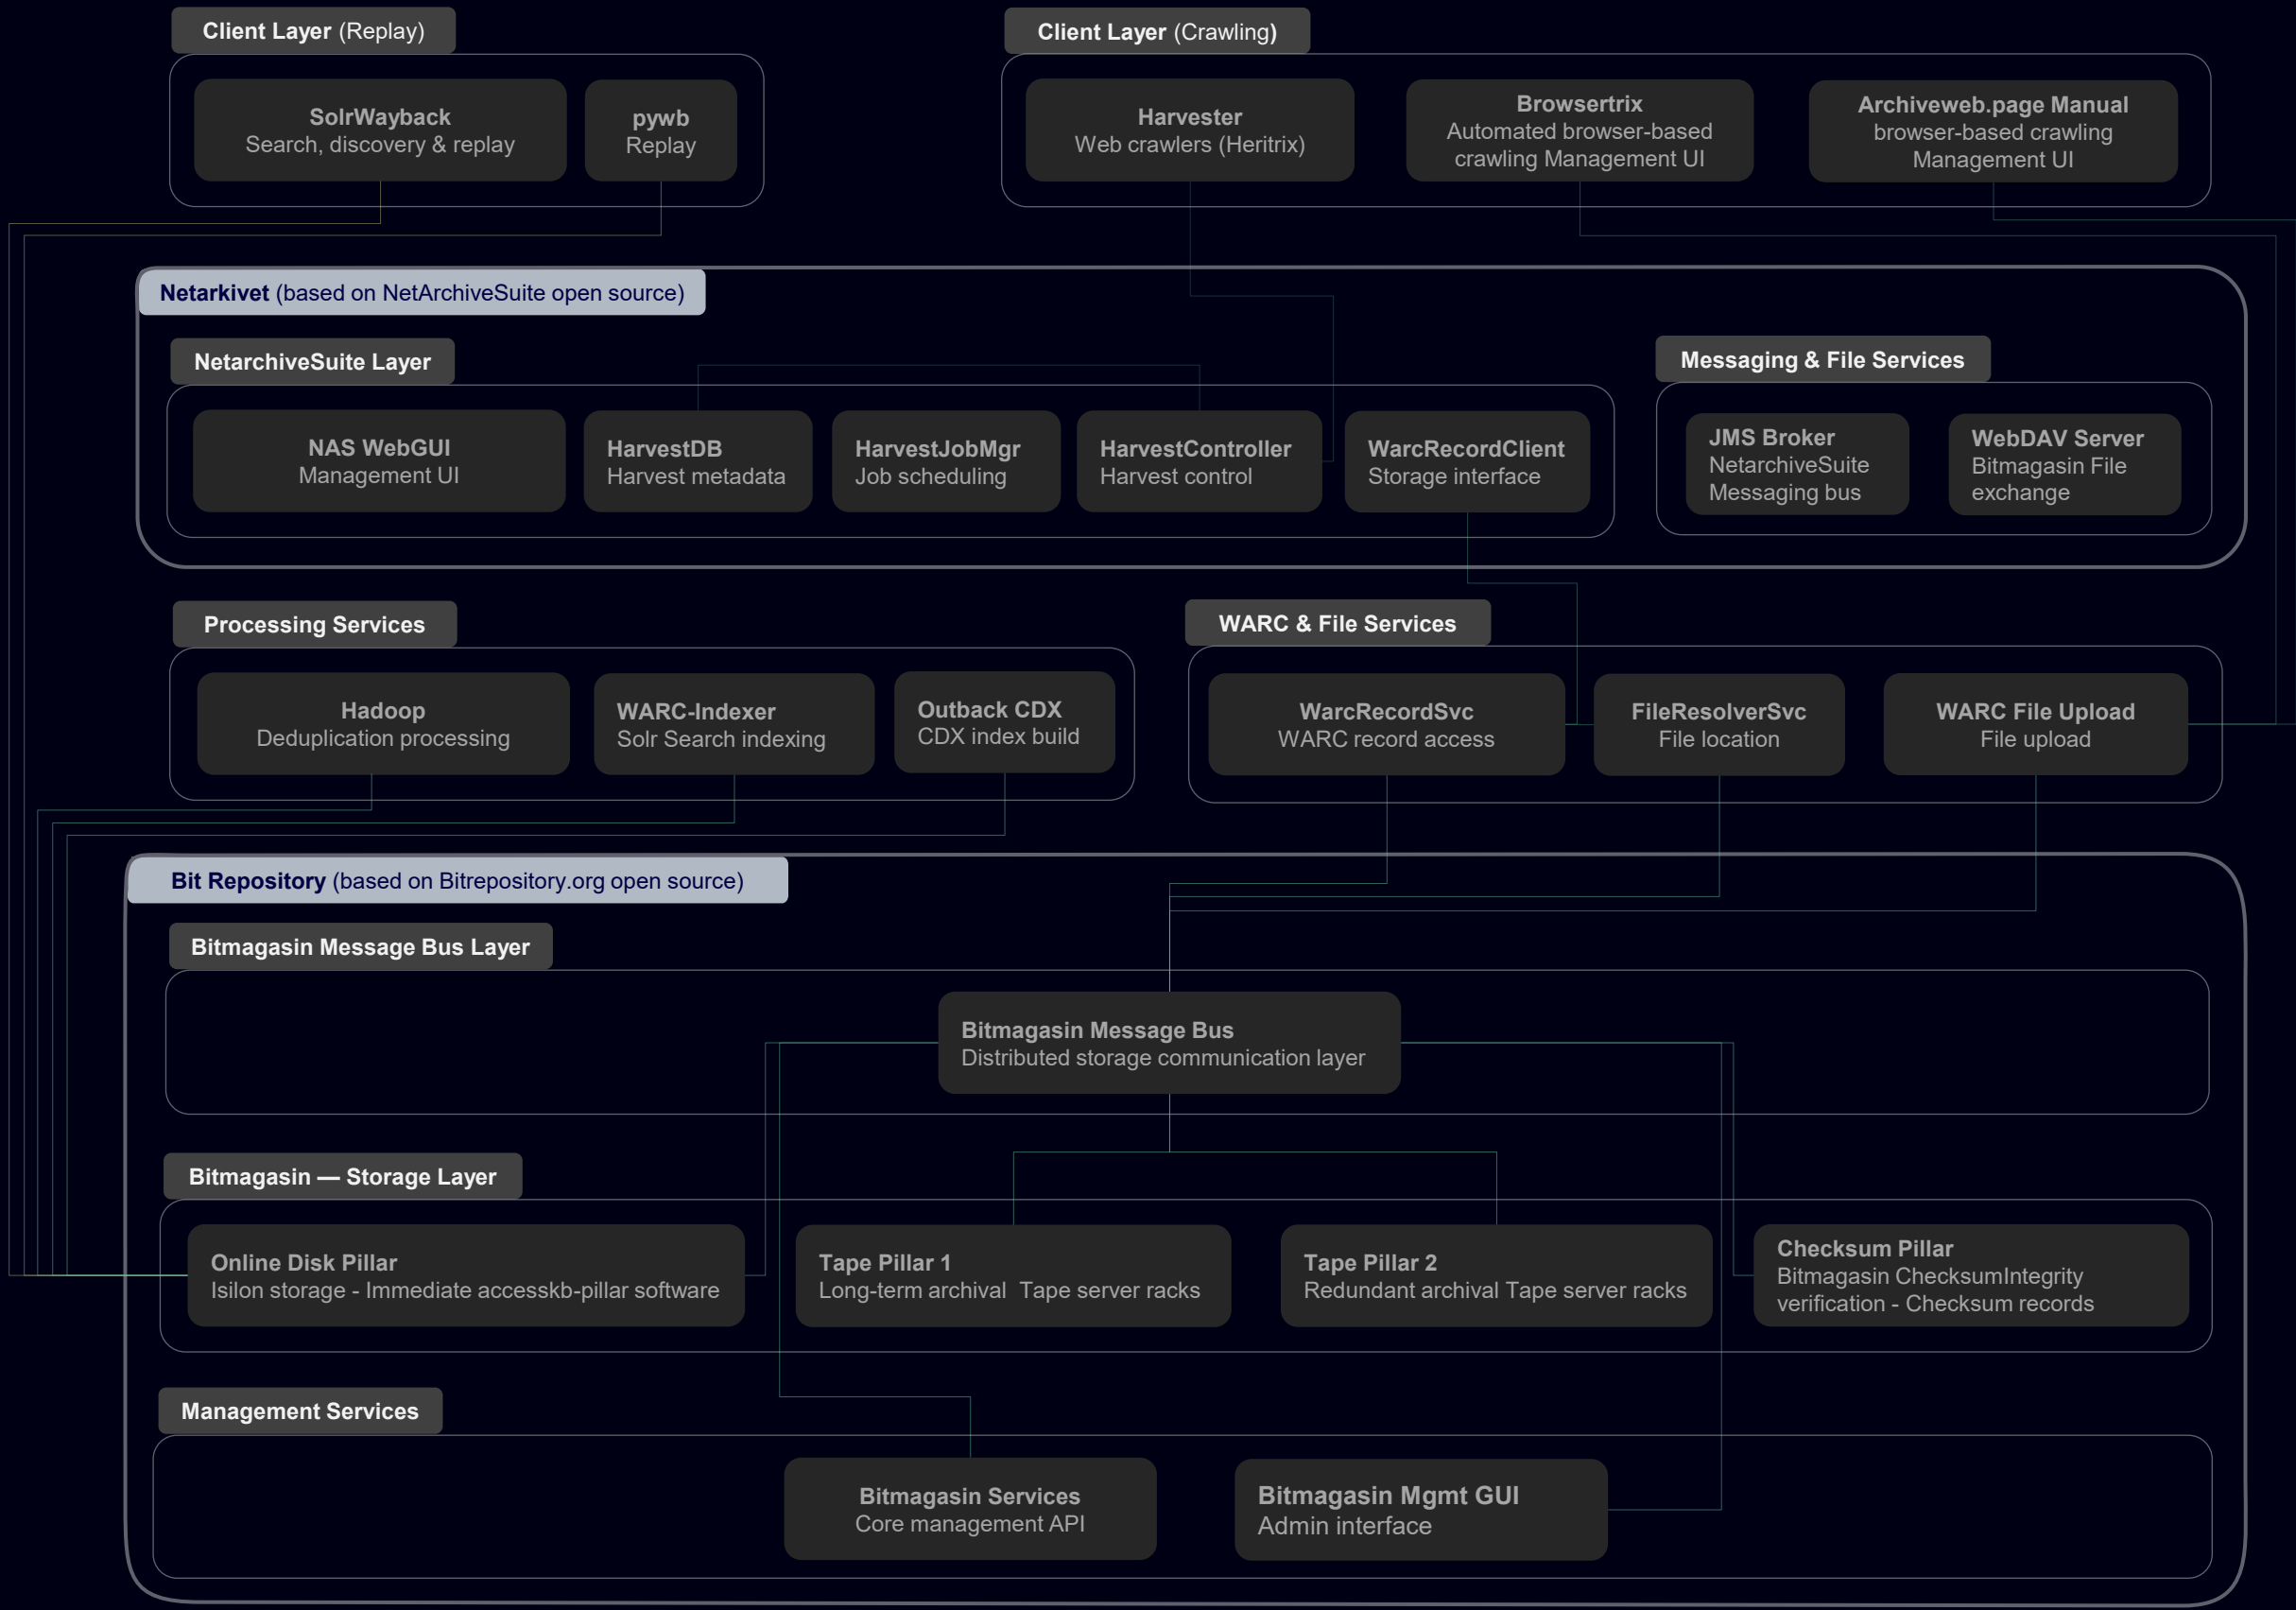

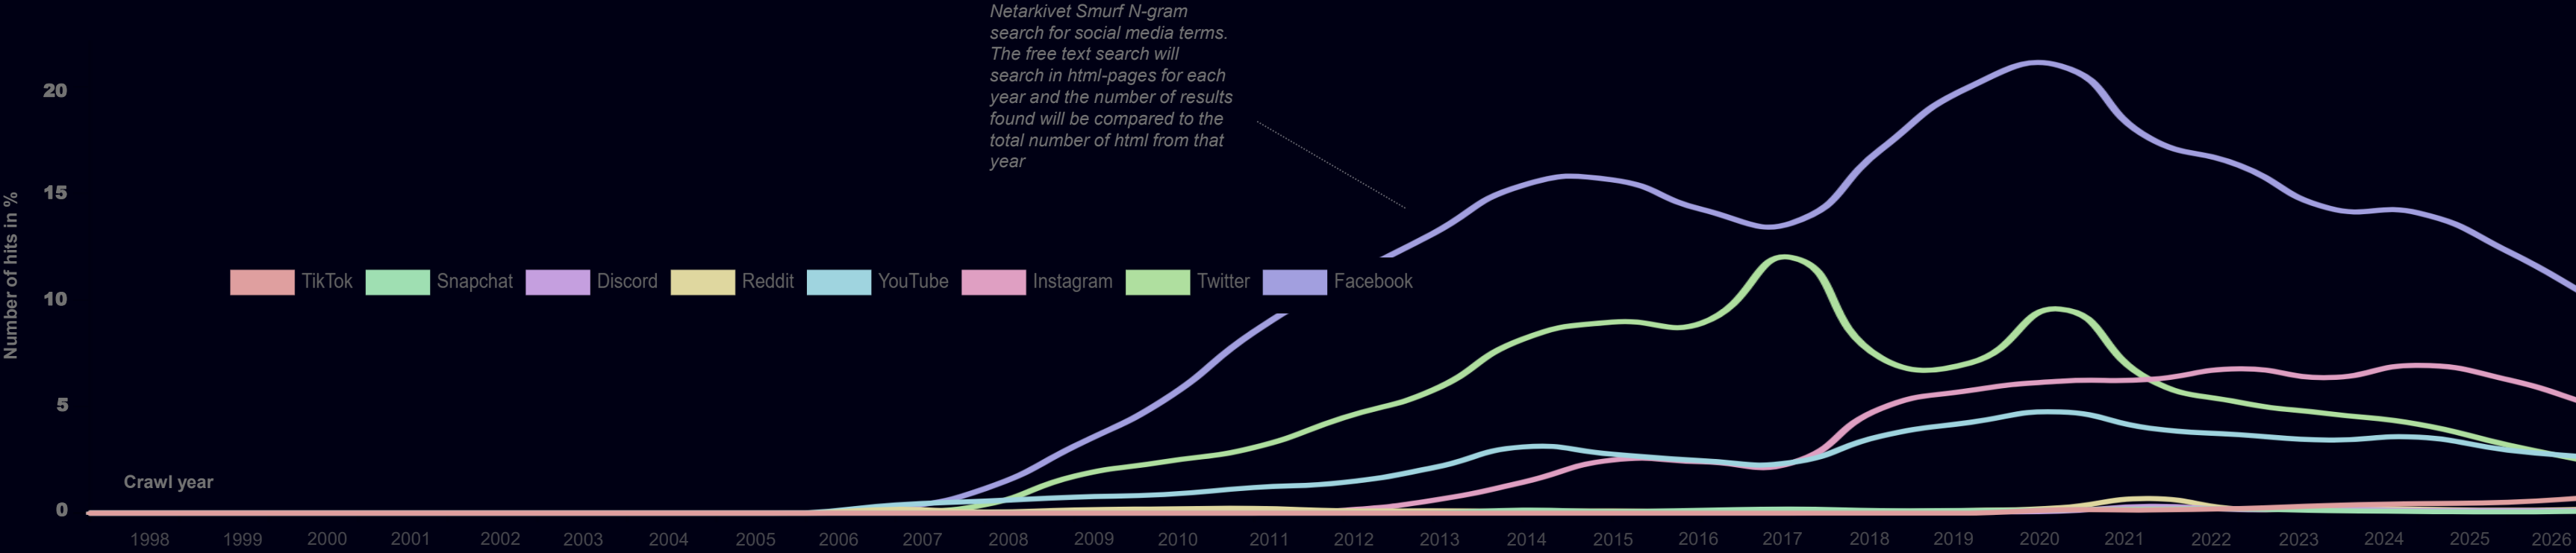

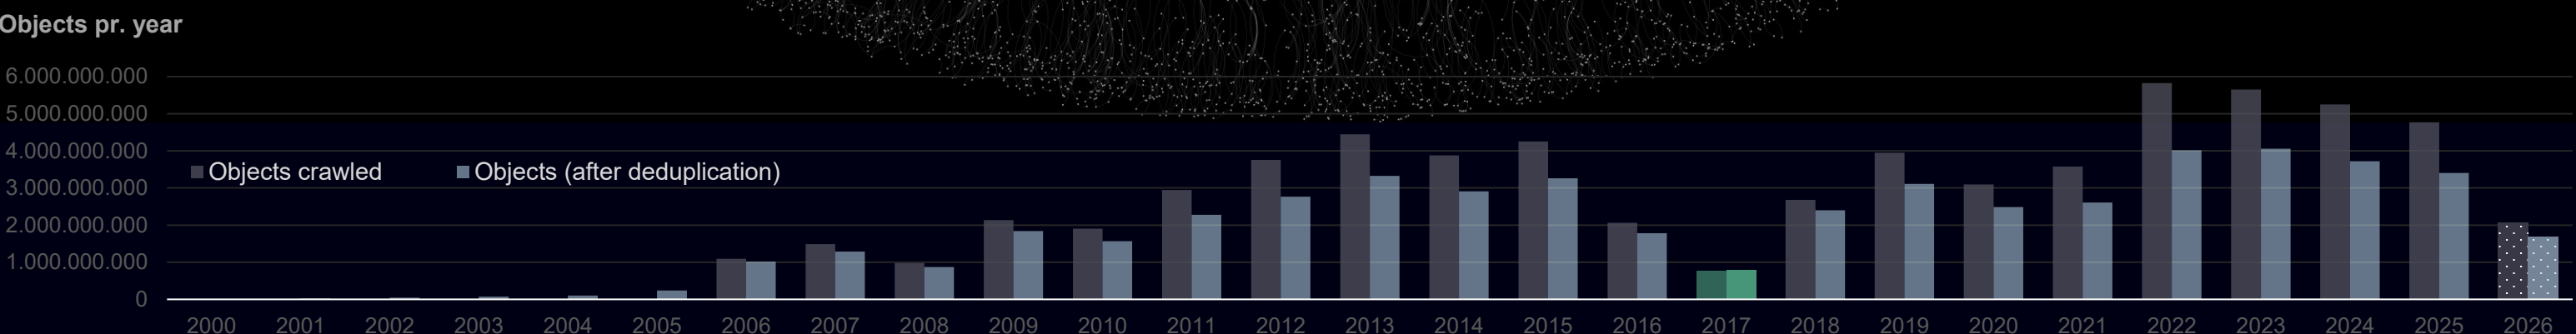

COLLECTING the Danish part of the Internet via the Legal Deposit Act – since 2005

ACCESS & DATA EXTRACTION for researchers

PRESERVING data in 3 copies

Advanced **FREE TEXT SEARCH & VISUALIZATION** in SolrWayback for all content

1590 TB data
51.412.842.342 objects
144.550.000.000.000 characters

CHALLENGES & LEARNINGS

Web archiving is gravitating further towards *post neutrality* and is definitely an increasingly daunting and complex task. With a, potentially, vast amount of data to collect, hard-to-crawl content, hard-to-replay/search data, walled gardens, crawlers being blocked, as well as resources being scarce. These are just *some* of the challenges we face as a memory institutions

We continue international and national collaboration on open source software, challenges and best practice, catering to current and future needs of users and improve resilience with IIPC, the NAS-community, iPRES, universities & many more. Collaboration is the key towards a better and more robust web archiving effort

Cultural heritage is fundamentally the traces that we, as humans - and here machines as well - leave in the world. And although web archiving today is a complex endeavor, I'm sure we'll leave valuable and interesting traces for the future

Current and future generations might appreciate that Netarkivet started early, was well supported by the Legal Deposit Act, collaborated widely, stayed curious and ambitious, and that the Royal Danish Library continuously has allocated resources to collect, preserve, and provide access
