

LTO-7 TO LTO-10

Migrating Holocaust Survivor Testimonies for Long-Term Digital Preservation

01 TESTIMONY COLLECTION

- More than 200 Holocaust survivor and eyewitness testimonies recorded since 1979
- Central to the VHEC's archival and educational mandate
- High evidential, historical, and cultural value
- Recorded as part of multiple testimony documentation initiatives, including the Vancouver Holocaust Documentation Project
- Includes recent additions, such as the Russian Survivor Testimony Project (2023)

02 WHY MIGRATE?

PRESERVATION NEED

- **Carrier refresh**
Migrate content before media ageing and hardware compatibility become barriers to access
- **Collection growth**
Accommodate new acquisitions and additional digitized materials
- **Integrity verification**
Fixity checks had not been performed on LTO-7 content

PRESERVATION OPPORTUNITY

- **Improve metadata & documentation**
Address inconsistencies and strengthen earlier documentation
- **Create standardized self-describing AIPs**
Bring preservation files, metadata, documentation, and fixity information together
- **Modernize + operationalize**
Update policy and workflow while establishing repeatable fixity monitoring, migration planning, and preservation-event documentation

03 DIGITAL PRESERVATION OVER TIME

04 PRESERVATION OUTCOMES: MORE THAN MIGRATION

05 CONCLUSION

A carrier refresh is a preservation intervention. Reassessing content before migration strengthened the VHEC's preservation workflows and advanced its practices across several areas of the NDSA Levels of Digital Preservation.
